PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

09/961,363

Applicant(s)

IDEHARA ET AL.

Examiner

Ramsey Refai

Art Unit

2152

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 13 February 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 46-71 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 46-71 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Amendment

Responsive to Amendment received February 13, 2007. Claims 67 and 68 have been amended.

Claims 46-71 remain pending further examination.

Response to Arguments

1. Applicant's arguments have been fully considered but they are not persuasive.
 - In the remarks, the Applicant argues in substance that Lazaridis is not a proper reference since the Examiner rejected the claims based on Figure 5 and the provisional application, which is relied upon by Lazaridis, only contains Figures 1-3, none of which correspond to Figure 5.
 - In response, the Examiner respectfully disagrees. Although Figures 1-3 do not appear to correspond to Figure 5, the provisional remains to properly support Figure 5. The provisional teaches a mobile device that enters an area where there is at least one bookmark beacon that emits a bookmark data packet, which contains information that is relevant to a guest device that the mobile device can communicate with (page 3). A bookmark beacon packet, which can be an IP address or a URL, is internally transmitted upon an activation signal from the mobile device. (page 4). In an example, the user approaches a computer printer. The computer printer has a bookmark beacon attached thereto the mobile device receives bookmark data packet from the computer printer. The bookmark data packet contains the physical or IP address of the printer. Upon receiving the bookmark data packet, the mobile device accesses the Internet through the communication network to communicate with the printer (page 9). Therefore the provisional properly supports Figure 5 of Lazaridis. Rejection is maintained.

Art Unit: 2152

Claim Rejections – 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 67 and 68 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter, which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Amended claims 67 and 68 further limit parent claim 66 by discussing the certain condition that is satisfied for deleting the device information by the controller. Claim 67 discusses deleting device information if a certain condition is satisfied “ wherein the certain condition includes a condition where the wireless communication unit fails to communicate with the portable terminal device after a predetermined time.” Furthermore, claim 68 discusses deleting the device information if a certain information is satisfied “ *wherein the certain condition includes a condition when the portable terminal device is out of a range from the wireless communication unit based upon connection checks at a constant time interval*” No support for such limitations can be found in the Applicant’ s disclosure.

Claim Rejections – 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 2152

5. Claims 46-65 are rejected under 35 U.S.C. 102(e) as being anticipated by Lazaridis et al (U.S. Patent No. 7,000,001).

6. As per claim 46, Lazaridis et al teach a data transmission device (Fig 5, element 74; message server) to be used in a system including said data transmission device and a data receiving device (Fig 5, element 72; printer) which are connected to a data network (Fig 5, element 18; Internet), and at least one portable terminal (Fig. 5, element 14) said data transmission device comprising:

a first transmission unit transmitting to said portable terminal without recourse to said data network a signal for obtaining device information from said data receiving device, the data receiving device information containing connection information for establishing a connection between said data transmission device and said data receiving device (column 6, lines 33-51; server gives the user the option to print the attachment at a network-enabled printer. user then transmits printer address information to server);

a receiving unit for receiving the data receiving device information from said portable terminal without recourse to said data network (Fig 5; printer address information is received wirelessly from portable device through wireless network); and

a second transmission unit for transmitting to said data receiving device a signal for requesting a connection based on the device information using said data network (Fig. 5, step 5, column 6, lines 61-63; server transmits attachment through internet to printer specified by the user using received printer address information).

7. As per claim 47, Lazaridis et al teach the second transmission unit transmits data to said data receiving device via said data network after establishing a connection with said data

Art Unit: 2152

receiving device (column 6, lines 60-61; attachment transmitted after connection with printer is established).

8. As per claim 48, Lazaridis et al teach said first transmission unit and said receiving unit transmit and receive data with said portable terminal via mobile telecommunication network (Fig 5, element 16; wireless network).

9. As per claim 49, Lazaridis et al teach said connection information contains an identification code for identifying said data receiving device on said data network (column 5, line 15, column 2, lines 37-41; IP address/URL)

10. As per claim 50, Lazaridis et al teach said identification code is an IP address (column 5, line 15, column 2, lines 37-41; IP address/URL).

11. As per claim 51, Lazaridis et al teach a data receiving device to be used in a system including a data transmission device and said data receiving device which are connected to a data network, and at least one portable terminal said data receiving device comprising:

a transmission unit for transmitting data receiving device information to said portable terminal without recourse to said data network according to a request signal received from said portable terminal without recourse to said data network, the data receiving device information containing connection information for establishing a connection between said data transmission device and said data receiving device (column 6, lines 33-51; server gives the user the option to print the attachment at a network-enabled printer. user then transmits printer address information to server); and

Art Unit: 2152

a connection unit for establishing a connection with said data transmission device according to a signal for requesting the connection transmitted from said data transmission device based on the device information (Fig. 5, step 5, column 6, lines 61-63; server transmits attachment through internet to printer specified by the user using received printer address information).

12. As per claim 52, Lazaridis et al teach said transmission unit comprises a communication unit communicating in short distances for transmitting the device information to said portable terminal (column 3, lines 16-32; IrDA)

13. As per claim 53, Lazaridis et al teach said communication means for communicating in short distances is a wireless communication means (Fig 5, element 16, column 3, lines 16-32; IrDA).

14. As per claim 54 A data receiving device as claimed in claim 53, in which said communication means for communicating in short distances is based on either Bluetooth, IEEE 802.11, HomeRF, or IrDA(column 3, lines 16-32; IrDA).

15. As per claim 55, Lazaridis et al teach which said communication unit comprises a wired communication unit (Fig 5; internet).

16. As per claim 56, Lazaridis et al teach said connection information contains an identification code for identifying said data receiving device on said data network (column 5, line 15, column 2, lines 37-41; IP address/URL)

Art Unit: 2152

17. As per claim 57, Lazaridis et al teach said identification code is an IP address (column 5, line 15, column 2, lines 37-41)

18. As per claim 58, Lazaridis et al teach a portable terminal to be used in a system including a data transmission device and a data receiving device which are connected to a data network, and said portable terminal said portable terminal comprising:

a first transmission unit for transmitting to said data receiving device a signal for requesting transmission of device information according to a request from said data transmission device, the device information containing connection information for establishing a connection between said data transmission device and said data receiving device (column 6, lines 33-51; server gives the user the option to print the attachment at a network-enabled printer. user then transmits printer address information to server);

a receiving unit for receiving the device information from said data receiving device (Fig 5; printer address information is received wirelessly from portable device through wireless network); and

a second transmission unit for transmitting the device information received from said data receiving device to said data transmission device (Fig. 5, step 5, column 6, lines 61-63; server transmits attachment through internet to printer specified by the user using received printer address information).

19. As per claim 59, Lazaridis et al teach said first transmission unit and said receiving unit comprise a communication unit communicating in short distances for transmitting and receiving data with said data receiving device (column 3, lines 16-32; IrDA).

Art Unit: 2152

20. As per claim 60, Lazaridis et al teach portable terminal said communication means for communicating in short distances is a wireless communication means (column 3, lines 16-32; IrDA).

21. As per claim 61. A portable terminal as claimed in claim 60, in which said communication means for communicating in short distances is based on either Bluetooth, IEEE 802.11, HomeRF or IrDA (column 3, lines 16-32; IrDA).

22. As per claim 62, Lazaridis et al teach said communication unit comprises a wired communication unit (Fig 5, element 18; internet).

23. As per claim 63, Lazaridis et al teach said second transmission means transmits the device information to said data transmission device via a mobile telecommunication network (Fig 5, element 16; wireless network).

24. As per claim 64, Lazaridis et al teach said connection information contains an identification code for identifying said data receiving device on said data network (column 5, line 15, column 2, lines 37-41; IP address/URL).

25. As per claim 65, Lazaridis et al teach said identification code is an IP address (column 5, line 15, column 2, lines 37-41).

Art Unit: 2152

Claim Rejections – 35 USC § 103

26. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

27. Claims 66 and 69-71 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lazaridis et al.

28. As per claim 66, Lazaridis et al teach a data receiving device to be used in a system including a data transmission device and said data receiving device which are connected to a data network, and a portable terminal, said data receiving device comprising:

a wireless communication unit for receiving device information of said data transmission device from said portable terminal without recourse to said data network, the device information containing connection information for establishing a connection between said data transmission device and said data receiving device using said data network (column 6, lines 33-51, Fig 5; printer address information is received wirelessly from portable device through wireless network).

Lazaridis et al fail to explicitly teach a controller for deleting the device information if a certain condition is satisfied. However, it would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to include a feature of deleting the received address information from the server memory once the task of printing the attachment has been completed in Lazaridis et al's system because it would increase functionality of the server by freeing up the server's memory of unnecessary data, such as the printer address information, which is no longer needed once the task of printing the attachment has been completed.

Art Unit: 2152

29. As per claim 69. A portable terminal as claimed in claim 60, in which said communication means for communicating in short distances is based on either Bluetooth , IEEE 802.11, HomeRF or IrDA (column 3, lines 16-32; IrDA).

30. As per claim 70, Lazaridis et al teach said connection information contains an identification code for identifying said data receiving device on said data network (column 5, line 15, column 2, lines 37-41; IP address/URL).

31. As per claim 71, Lazaridis et al teach said identification code is an IP address (column 5, line 15, column 2, lines 37-41).

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
